REDUCE-RESUSE-RECYCLE

To help the planet we need to reduce, reuse and recycle.

We also need to remember to put our rubbish in the bin. Old banana peels can be put to reuse for compost so our nature can grow and the trees can breathe. So don't cut too many trees down or we might not have any more trees. Also that we can breathe.

If you see rubbish on the floor then even if it's not yours, you can still pick it up and put it in the bin. If you leave it there a bird might think there is food in it and get its beak stuck in it. If it's a can you could cut yourself.

Don't forget to put your rubbish into the correct bin if you put it in the recycle bin then who knows where it can go. It might go into the sea and the fish or whales or sharks even turtles will get affected and their heads might get stuck in a plastic bottle and they may suffocate and die.

Remember to put your rubbish in the right bin. to help the planet be a safe environment.

WATER POLLUTION

It is fun to go on jet ski rides, boat rides and all cool rides you can have in the water, but it is not very good for the water. Normally these big toys on the water need fuel, so when it drives gas comes out and it has toxic in it. From this the sea animals can die because the water gets polluted. It could also leave ink or something and it will pollute the fish and sea animals, then the fish might die and dolphins might get stuck in a propeller and could get hurt. Then the fish might start to bleed and the water might get polluted and maybe poison the beautiful sea creatures. If you see a fish or a sea creature when you are in a boat, then maybe if you have a propeller try slow down and wait for the sea animals to leave, and then you can start again because it's not nice to hurt the sea animals. Also it pollutes the sea and the Ocean.

**I HOPE YOU KNOW HOW TO KEEP YOUR ENVIRONMENT CLEAN
AND NOT TO POLLUTE THE WATER.**
